

UNSW
SYDNEY

School of Chemical Engineering

UNSW offers dynamic programs fostering hands-on learning for successful careers. Backed by cutting-edge research, we pioneer innovative solutions in clean energy, nanostructured materials, targeted medicine, and decarbonisation initiatives. We are focussed on sustainability and shaping a future where innovation meets environmental responsibility.

School of Chemical Engineering

Chemical product engineers create new materials and products that add value to people's lives.

Chemical engineers work to design, operate, and maintain the processes that allow for safe, economic and environmental-friendly manufacturing, at large scale.

Food scientists and engineers specialise in the production and supply of sustainable and nutritious food and beverage.
