

UNSW Engineering

Taste of Research Scholarship Program

Research project plan template

- **Please download a copy before editing this document.**
- *This research plan must be completed and approved by your project supervisor.*

Title of the Project

Short and specific line of what the project does, e.g : *From CAD and digital imaging to fully-automatic adaptive structural analysis*

Project Description

Please tell us what research you will undertake? (0.5 to 1 page)

This section should explain the problem/topic you will be addressing and why this is of importance to study. E.g., explain how we do not have an accurate model for turbulence under a set of conditions and you will be investigating a new way to simulate the flows so we can better design plane wings to act under these conditions.

UNSW Engineering Taste of Research Scholarship Program Research project plan template

Project Days

Clearly identifying days that you will be working on the project total 60 days FTE.

E.g.,

- *Summer (26 Nov until 20 January) - 5 days/week full time = 40 days full time equivalent*
- *Term 1 - one day/week full time + 2 days/week part time = 20 days full time equivalent*
- *Total = 60 days full time equivalent*

Suitability for this Project

Please tell us why you are a good fit for this project?

This should refer to your background experience and interests in the work. *E.g., I have strong analysis and computer skills as shown by my performance in relevant modules reflected on my transcript. I have also had past experience with high performance computing as shown on my resume which will help me with coding the automated structural analysis.*
